

BARCODE PRINTING TIPS

Print Quality

The printed quality of your barcode is very important. Please print 3 or 4 test barcodes. Use the following examples to check the quality of your barcodes.

If your barcodes look like this - Great!

If your barcodes look like one of the barcodes below - Realign your print cartridge and try again. Print barcodes using the NORMAL or DRAFT setting, not high quality. The ink will be too dark.

If it looks like this - Replace your ink cartridge and align the new one.

Label Alignment Troubleshooting

If your barcodes are not aligning properly on the labels, check your

Adobe or PDF viewer. It could be resizing them when printing. Print settings are easily fixed by following the simple steps.

1. Have the labels displayed on your screen.
2. From the FILE menu, choose PRINT.
3. On the PRINT window that pops up, locate the "Page Handling" section which is usually about half way down on the left. There will be a "Page Scaling" drop-down box, and your options will include None, Fit to Printable Area, Shrink to Printable Area, Multiple Pages Per Sheet and Booklet Printing. Basically, you are wanting to print the document at its full-size.
4. Select "None" in the Page Scaling drop down box and then click OK to print your labels.

NOTE: Before printing on your actual labels, print on a blank sheet of paper to check the alignment of your labels.

****For Windows Users – It may be different for Mac***
